

DIMENSIONLESS PARAMETERS

Fluid

Solid

Coordinates \underline{x}

Time t

Velocity field \underline{U}

Viscosity μ

Size L

Gravity g

Density ρ

Velocity Data U_0

Coordinates \underline{x}

Time t

Displacement field $\underline{\xi}$

Stiffness E

Size L

Gravity g

Density ρ_s

Displacement Data ξ_0

FLUID AND SOLID

$$g(\underline{U}; \underline{x}, t; \mu, \rho, U_0; L, g; E, \rho_s, \xi_0) = 0$$

N=11 parameters

FLUID AND SOLID

	\underline{U}	\underline{x}	t	μ	ρ	U_0	L	g	E	ρ_s	ξ_0
L	1	1	0	-1	-3	1	1	1	-1	-3	1
M	0	0	0	1	1	0	0	0	1	1	0
T	-1	0	1	-1	0	-1	0	-2	-2	0	0

Rank $R=3$

Number of dimensionless parameters $P=11-3=8$

A NEW DIMENSIONLESS QUANTITY

$$g(\underline{U}; \underline{x}, t; \mu, \rho, U_0; L, g; E, \rho_s, \xi_0) = 0$$

$$G\left(\frac{\underline{U}}{U_0}, \frac{\underline{x}}{L}, \frac{U_0 t}{L}, \frac{\rho U_0 L}{\mu}, \frac{U_0}{\sqrt{gL}}, \frac{\xi_0}{L}, \frac{\rho_s g L}{E}, A\right) = 0$$

$$A = \frac{\text{Fluid}}{\text{Solid}}$$

THE MASS NUMBER

$$M = \frac{\rho}{\rho_s}$$

Mass number

Air

$$M = O(10^{-4})$$

Water

$$M = O(1)$$

THE REDUCED VELOCITY

$$U_R = \frac{U_0}{\sqrt{E / \rho_S}}$$

Reduced velocity

$$U_R = O(10^{-3})$$

$$U_R = O(1)$$

THE CAUCHY NUMBER

$$C_Y = \frac{\rho U_0^2}{E}$$

Cauchy number

$$C_Y = O(10^{-3})$$

$$C_Y = O(1)$$

THE NEW DIMENSIONLESS NUMBERS

$$G\left(\frac{U}{U_0}, \frac{x}{L}, \frac{U_0 t}{L}, \frac{\rho U_0 L}{\mu}, \frac{U_0}{\sqrt{gL}}, \frac{\xi_0}{L}, \frac{\rho_s g L}{E}, A\right) = 0$$

$$M = \frac{\rho}{\rho_s}$$

Mass number

$$U_R = \frac{U_0}{\sqrt{E / \rho_s}}$$

Reduced velocity

$$C_Y = \frac{\rho U_0^2}{E}$$

Cauchy number

CLASSIFYING PROBLEMS USING DIMENSIONLESS NUMBERS

$$M = \frac{\rho}{\rho_s}$$

Mass number

$$U_R = \frac{U_0}{\sqrt{E / \rho_s}}$$

Reduced velocity

$$C_Y = \frac{\rho U_0^2}{E}$$

Cauchy number

CLASSIFYING PROBLEMS USING DIMENSIONLESS NUMBERS
